

Weekly Report for YiYu Shi's work in week4

February 12, 2006

1 Work1: Working with Paul on the RCSteiner for multi-net routing

I have implemented the related MATLAB code and give it to Paul. Paul then will use C to see the results.

2 Work2: Read papers

I am reading papers on nonlinear model order reduction as well as thermal-aware routing. Particularly, I am looking into something related with Hankel eignvalue decomposition, which incorporates the paper I am reviewing.
